

DalLastic System Connectors

Dalsouple DalLastic system connectors offer an optimised complete surfacing system, one of the particular features of which, is extremely simple handling when it comes to laying the tiles. The system connectors anchor the tiles firmly together. The surfacing is, therefore, self-locking.

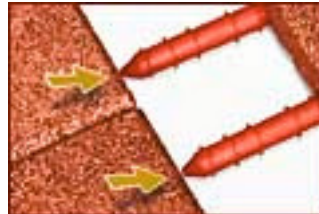

1. Insert ...

The open end of the DalLastic plug connectors is inserted into the tile past the first ring.

2. Connect ...

The tapered end enables the tiles to be aligned precisely and initially locked. Press evenly on all four plug connectors to make the final connection.

3. ... Done !

Finish by pressing the tiles firmly together.

Advantages:

Dalsouple DalLastic surfacing systems are extremely simple to install. The firm anchoring of the tiles minimises the formation of gaps, e.g. as a result of heavy loads.

Trouble-free adjustment thanks to the tapered tip of the system connector.

Available in external diameters of 8 mm and 15 mm (measured at the ring).

Usable with all tiles over 20 mm thick.

Self-locking: in most cases, therefore, it is unnecessary to bond the tiles.
