Sir,

Thank you to find enclosed the last tests of phonic debility to collision noises according to the european norm DIN EN ISO 140-8 and the results are superior to out competitor NORA

- 2.5mm $\Delta L w = 11dB$ $\Delta L lin = 4 dB$
- 3mm $\Delta L w = 11dB$ $\Delta L lin = 4dB$
- 4mm $\Delta L w = 13dB$ $\Delta L lin = 4dB$
- 4mm sous couche $\Delta L w = 17dB$ $\Delta L lin = 6dB$

The results give to our material excellent acoustics properties.

Best regards
